EVOLUTION IS A JOURNEY

Kilometers travelled teach us change and improvement, to look at things from a new perspective.

32

HOW MANY ROADS

Sometimes a seemingly simple object hides a fascinating, beautiful story.

54

LIMITLESS: A STORY OF SELF-ESTEEM

Just when we don't expect to find it, that is where imagination is at its best.

ORIGINALLY YOURS | 

Original is...

Original

It's a word that says so much.
About us and you.

It opens a universe of meanings. It goes straight to the core, to the origin.
Original. Like a fingerprint, like a signature.

Original. Like a new way to create improvement.

Original. Like the drive for efficiency, even in the simplest things.

Original. Like something akin to us, representing our uniqueness and diversity.

Original. Like beauty, the positive feeling that makes life better.

In details too.

Original. To us, it's more than a word.
It's the way we have chosen to do our part,
at our best, in a system where we are
all connected.
It's an attitude.
It's our commitment.
It's the promise to keep going
in our journey
with you.

COMPANY

OVER 70 YEARS OF PASSIONATE COMMITMENT
TO PROVIDING ORIGINAL,
VALUE DRIVEN SOLUTIONS FOR INDUSTRIAL
AND COMMERCIAL VEHICLES.

LAGO is a family-owned company that operates in the industrial vehicle accessories and components sector, where it has built a recognizable and respected identity.

Established in Italy, at its historical headquarters in Fontaniva, Padua, the company boasts over 70 years of experience and a history of constant growth, all while staying true to the roots and the values from which it was born.

Over time, the name LAGO has become synonymous with high quality, reliability, and creativity. We create tool and storage boxes, mudguards, fire extinguisher boxes, water tanks and other complementary

products for industrial and commercial vehicles. We design them to significantly improve the customer experience, providing "Made in Italy" solutions that aim to reduce assembly time and the number of vehicle parts. Our goal is to enhance overall efficiency for those who use our products daily. How is that possible? By balancing two crucial aspects: meticulous attention to detail and a broader view of the product within its overall context.

However, we understand that a company's distinction lies not only in the quality of its products and services. We firmly believe that fair competition can be a healthy incentive for

innovation and that trust is developed day by day through respect for people and rules. This is why our Code of Ethics is particularly valuable to us, as it encapsulates our commitment to work and serves as a constant source of inspiration for our company.

LAGO products are available in more than 50 countries through a network of long-standing collaborations with highly qualified distributors and partners. Transparency and fairness towards partners and market players guide us in every choice and action. We work with great passion for improvement, focusing on what can truly make a difference.

The journey continues, always looking towards the future in search of more complete, practical, and efficient solutions.

In one word:
ORIGINAL.

WE ARE A GROUP

LAGO'S PROJECTION TOWARDS NEW MARKETS
HAS BEEN STRATEGICALLY SUPPORTED
BY THE ESTABLISHMENT OF COMPLEMENTARY
BUSINESS ENTITIES:
AAISTER, LAGOGENESIS AND LAGO DO BRASIL.

LAGO ACCESSORI

The mother company of our Group. For over 70 years, LAGO ACCESSORI has been translating its commitment and passion into the creation of original and valuable solutions for industrial and commercial vehicles: the result is products that stand out in the market for their design, engineering and high performance. The range includes toolboxes, fire extinguisher boxes, mudguards, as well as water tanks, special carriers, protection devices and first aid hygiene kits.

AAISTER

AAISTER, distribution specialist in Italy for the industrial vehicle sector, handles the entire LAGO range exclusively, in conjunction with other premium branded complementary products. Since 2009 AAISTER has been working closely with the most respected representatives of Italian vehicle construction, body shops and top notch retailers through its highly organized sales network. With a mission to be a supply partner that can be counted on, AAISTER's focus lies in putting a complex and highly fragmented supply within reach thanks to a strategically positioned network of experienced, loyal and highly competent operators.

LAGOGENESIS

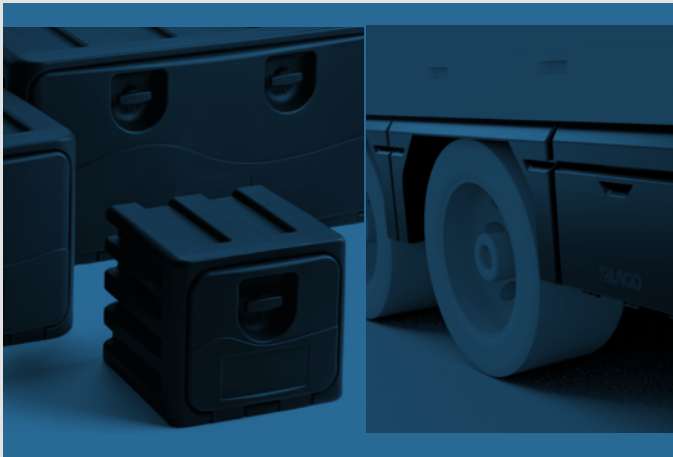

LagoGENESIS is the technological heart of the group: a state-of-the-art laboratory where mechanical and electronic devices for the protection, management and control of fuel inside the tank of industrial and commercial vehicles are designed and developed. All LagoGENESIS solutions are inspired by the principles of simplicity, safety and high reliability.

LAGO DO BRASIL

LAGO do Brasil is a production and trading company active in one of the most industrialised areas of southern Brazil. It produces accessories and components for the industrial vehicle sector designed specifically for the needs of the local market, which lie on the crossroad between LAGO do Brasil's research and development capabilities and the established know-how of LAGO, the Italian parent company, which brings its legacy for quality Italian made products.

EVOLUTION IS A JOURNEY.

«BECAUSE THOSE WHO USE THEIR IMAGINATION ALSO KNOW HOW TO REALLY TRAVEL. AND THOSE WHO KNOW HOW TO TRAVEL NEVER STOP USING THEIR IMAGINATION.»

Have you ever thought about what evolution is? I have...
In nature, some changes are made to last. They become 'successful' because they improve upon what came before. That's how it was for me. I was different. I was highly evolved, in fact. I was the first of my kind.

No one had ever thought that a toolbox could be two-colored, and beautiful to look at. Or that it could be equipped with an external instead of internal locking system.

But let's be clear: innovations like mine don't happen by chance, like a roulette game. They are the result of trials, many trials. Of tests and errors. Of tenacity and imagination. Of taking new paths, at

one's own risk. Of the work of determined and imaginative people. Of someone who knows what it takes when you're on the road... I was designed for that purpose and wanted to be that way. There is nothing random about me. Not even the smallest detail. I made myself known and recognized, even with an unusual name to remember: Vertigo.

Take, for example, the material I am made of, which might be taken for granted but shouldn't be: resin. It is strong yet light at the same time, and for travellers, that means a lot. It is versatile; it can take any shape you give it. It can also be molded using different technologies: in my case with rotational molding, a system that

allows very large parts to be created. An extraordinarily resistant material. So strong that I can easily replace a metal box in terms of strength and durability.

But that's not all. In the place where I was born, injection molding is also used, allowing for any shape to be created, for any need. I'm talking about solutions in every format and size, for vehicles from the lightest to the heaviest. Toolboxes with a precise surface finish, recognizable even to the touch. Toolboxes that are part of a coordinated, aesthetically coherent product array, where ergonomics and user-friendliness are key features.

After me, the evolution continued, and my sisters arrived.

Each one born from a journey. Designed for the traveller. Each ready for many more journeys to come. Black Dog, Daytrippin', Kompos-it, Mother Trucker, Origin. Like any true traveller, able to adapt to any context, always bringing out the best. Because those who use their imagination also know how to really travel. And those who know how to travel never stop using their imagination.

**HAVE YOU EVER
THOUGHT ABOUT WHAT
EVOLUTION IS?**

KOMPOS-IT

INTEGRATED SYSTEM OF MULTI-PURPOSE MODULAR STORAGE BOXES

Copolymer Polypropylene Compounded

Colour: black (UV stabilized)

HIGH STORAGE VOLUME

VERSATILE: a vast choice of options yields configurations which are suited to transportation of ADR and load security equipment, tools and more.

COMFORT: thanks to the dedicated isothermal module, it's possible to set up a traveling kitchen.

Six basic elements to be easily and quickly assembled by means of simple interlocking snaps

60% volume reduction (transport and stock)

Each single module is specifically designed for its function in the assembly:

- the bottom module is well structured for loading
- the lateral parts are well structured to bear the brackets

Fully integrated lid

Manual opening equipped of key lock and lock cover

Kompos-it is lab and road tested with 60 kg distributed load using dedicated mounting hardware produced on specification by LAGO. Use of such dedicated mounting hardware is compulsory to ensure optimum product performance.

HOW MANY ROADS.

« I HAVE COME A LONG WAY. I HAVE SEEN STONES, SAND, RAIN, ICE, FOG, AND HOT ASPHALT. LONG JOURNEYS AND TERRAINS OF ALL KINDS HAVE MARKED MY HISTORY. »

Of course, the focus has always been on her. "She marked the beginning of human civilization". She evolved to become the star of great sporting, hyper-technological, futuristic performances. In this modern world, she remains the queen. But without me, her protector, her work would be much more difficult.

I, a noble samurai, a proud knight, have been her solid armor for hundreds of years. I fended off the blows generated by her movement. The wheel in eternal rotation meets its large, reliable, and strong defense.

I have come a long way. I have seen stones, sand, rain, ice, fog, and hot asphalt. Long journeys and terrains of all kinds have marked my history. I have accompanied great transports, made memorable feats possible, and helped open new trajectories. From

generation to generation, traveling thousands of kilometers on the roads of the world. **My ancestors,** made of wood and metal, originally covered the wheels of wagons and carriages when roads were all mud and dust. With the arrival of bicycles, motorbikes, and cars, our shape was molded into increasingly slender lines. So much so that in Germany, we were called "**flügel**", **wings.** How elegant and refined that word is. Only we knew how to make debris and dirt fly away from passengers and bodywork, making the journey safer and more pleasant, always maintaining a sleek, streamlined style, enriching the means of transport with personality and character. Our sinuous curve guided the eye along metallic volumes. A touch of style was added. It became part of a motor vehicle's very identity, especially as design ventured into bolder, sleeker shapes.

Over time, like cloaks or lightly moving hoods, **antispray** appeared at our side. Our protection became more secure, more precise, our embrace more enveloping, picking up even the tiniest drops released into the air.

Every component around me has been ennobled on this long journey. The **tubes** needed to attach me to the frame have become more essential, easy to assemble and repair, resistant in their materials, aesthetic as well as functional. Because if something can be well made, why not make it?

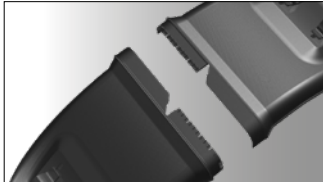

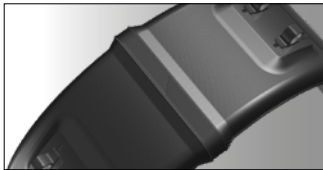

In time, metal was joined **by plastic.** Today, my suit is studied and molded in every smallest detail: to be aerodynamic, efficient. Beautiful to look at, pleasant to the touch, more resistant to wear. Integrated into everything.

Designers, technicians, and engineers met to improve me. To make me an object that evolves over time. More precious. She and I continue to meet and are inseparable. She keeps on going. And I will continue to protect each of her new journeys.

And that dust and mud?
I'm proud of them.
They tell my story.

KOMPLEET KOMBI

MODULAR MUDGUARD WITH INTEGRATED
MUDFLAP, ANTISPRAY AND ADJUSTABLE BRACKETS

UV stabilized polypropylene copolymer

Colour: black and grey (UV stabilized)

Values on all fronts

4 different modules: Kombi Basic, Kombi 150, Kombi 250 and Kombi 350

50 / 75% less packed volume - Save on logistics, handling and storage

Simple assembly

No preliminary drilling, riveting, gluing or fastening operation

Substantial weight reduction through part integration

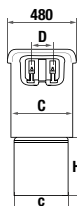

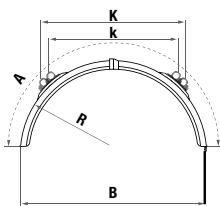

Scratch resistant proprietary surface

Adjustable Ø42 mm fixing eyelet - Max torque 12Nm

Eyelet clamping fasteners Geomet® surface treated - Extra corrosion resistant - Absence of other ferrous parts

Approved anti-spray device according to regulation (EU) 2021/535

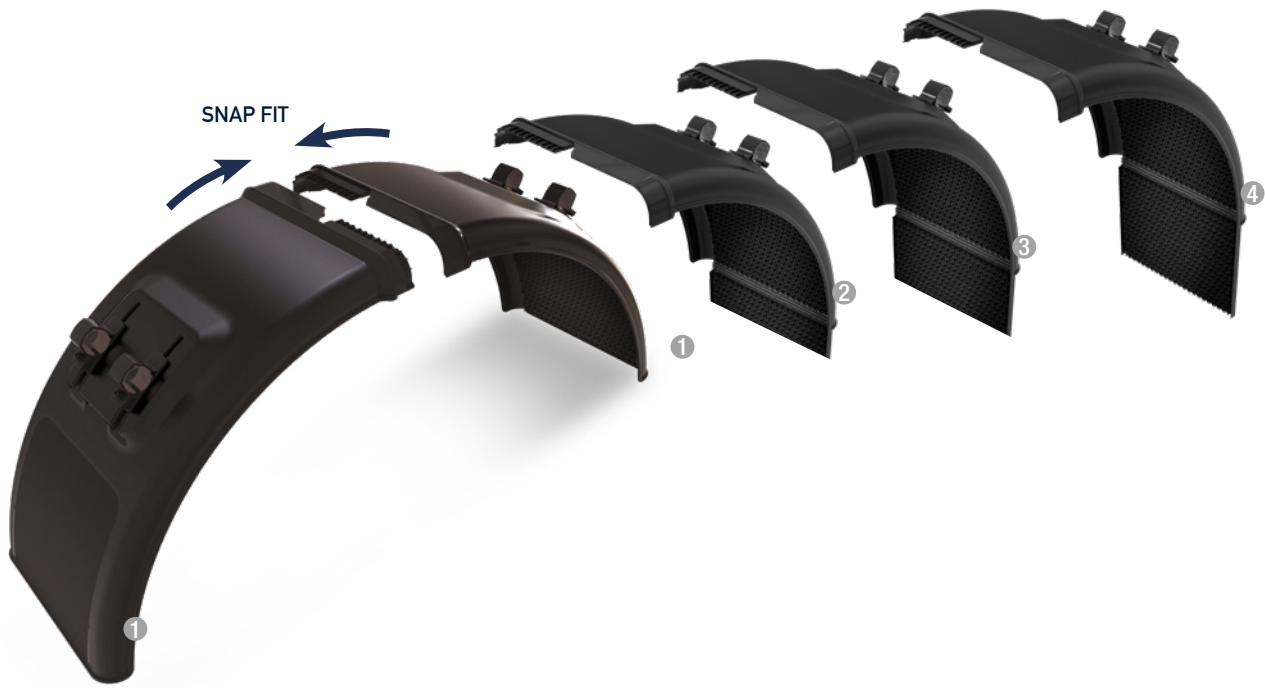

further details under download section www.lagoaccessori.it

SPRAY BUSTER

MUDFLAPS WITH ANTI-SPRAY

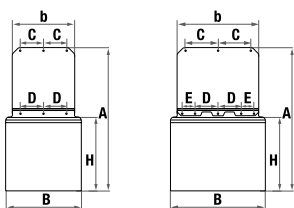

UV stabilized polypropylene copolymer

Colour: black (UV stabilized)

Mudflap with homologated anti-spray device
3 sizes
Scratch resistant proprietary surface
Supplied with mudflap/mudguard mounting fasteners

Approved anti-spray device according to regulation (EU) 2021/535

QWIKLOK

MUDGUARD FITTING BRACKETS

Nylon GF - Epdm rubber PA6

Colour: black - red (UV stabilized)

Qwiklok mudguard mounting eyelet & bracket system
 Quick, effective and smart fastening / assembly solution without fixing hardware
 Assembly time 50% quicker compared to traditional systems with hardware
 Fits Ø 42mm tubes
 Fully adjustable
 Supplied rail/mudgard with mounting screws, nuts and washers
 Bottom or frontal mounting

QWIKLOK
COMPATIBILITY

Check compatibility of Qwiklok system on mudguards families:

SARÀKA

MUDGUARD QUICK FASTENING KIT

UV stabilized acetalic resin

Colour: black (UV stabilized)

Fully adjustable pair of mudguard quick fastening brackets
 Provides unlimited left and right adjustment, guarantees perfect ground alignment and lining up with adjacent mudguards
 No preliminary drilling, riveting, glueing or fastening necessary
 Assembly time 50% quicker compared to traditional systems
 No tube end caps required
 Fits Ø 42mm tubes
 Customisation ready - Plastic laminated reflective adhesive label - Four colour process print - Minimum order and production requirement

Code	description	std packaging

TOOBEE STEEL

MUDGUARD BRACKETING PIPE

Steel FE320 - UV stabilized polyethylene endcap included

The most recent generation of mudguard stay, TooBee represents a fresh new look at mudguard mounting hardware. The weld free monolithic approach for this patented component implies greater resistance to mechanical stress and to material fatigue deriving from cyclic loading. Unparalleled corrosion resistance is achieved through the absence of surface weld impurity and the fluidity in surface forming.

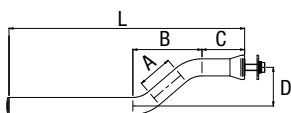

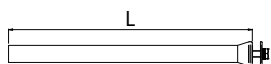

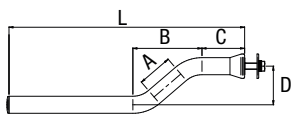

TooBee is supplied with the endcap preassembled and individual mounting hardware kit is included. TooBee can be galvanized or finished with a double coating (galvanized/KTL + black powder coating).

LIMITLESS: A STORY OF SELF-ESTEEM.

Yes, I know what you're thinking. That someone with a job like mine shouldn't have too many distractions. No complexities. Just someone who gets straight to the point. Some might think that certain issues for me are "off-topic". After all, I'm always expected to be straightforward and intuitive. No complications.

But there's one thing I've learned over the years: why limit yourself? Even I didn't believe that. Yet, when ingenuity is put to work,

the effects can be quite surprising. Creativity can play its part where we least expect it. Now, I too can be associated with the word "design". Let me tell you more: looking at me today, you can talk about ergonomics. It means that my form, my parts, are specifically designed for fluid gestures, contributing to the well-being of those who work with me.

There's something else that makes a real difference. Now I have many looks,

many faces. It's not just about taste; it's certainly not vanity. Each form I take is suited to a particular situation. Every material I'm made from has its own installation conditions. For each of my designs, there's an ideal context. Small or large spaces. Vertical or horizontal. Different opening systems, depending on the available space and the position I need to occupy. And with straps to handle even the toughest vibrations. I can, even when designed

to, function as a side guard. Not everyone can do that.

From now on, I won't be shy, the one everyone thinks is closed off. I won't be just "the strong one". From now on, call me "elegant and intelligent". Because I deserve it.

«FROM NOW ON, I WON'T BE SHY,
THE ONE EVERYONE THINKS
IS CLOSED OFF. I WON'T BE JUST
"THE STRONG ONE".
FROM NOW ON, CALL ME "ELEGANT
AND INTELLIGENT".
BECAUSE I DESERVE IT.»

SHELLY

FIRE EXTINGUISHER BOX

UV stabilized polypropylene copolymer

Colour: red translucent (UV stabilized)

Suitable for 6kg fire extinguishers

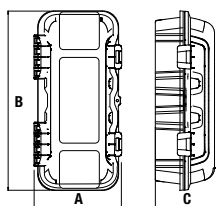

Red translucent finish allows immediate identification of the extinguisher for the purpose of visual inspection.

Water and dust resistance provided by integrated sealing and coupling features in lid.

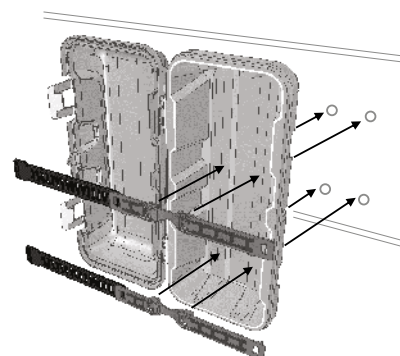

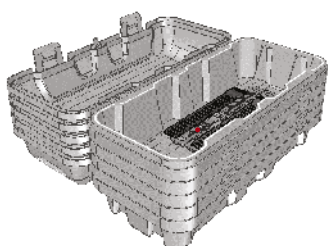

Quick release latches ensure prompt opening of the lid in case of an emergency.

The unique fire extinguisher retention system mounts directly to the vehicle whilst the fire extinguisher outer case becomes a non-structural protective element for the extinguisher itself.

Adjustable and extensible high-resistance elastomer retention straps.

SEENA 2.0 SUPPORTS & REINFORCEMENTS

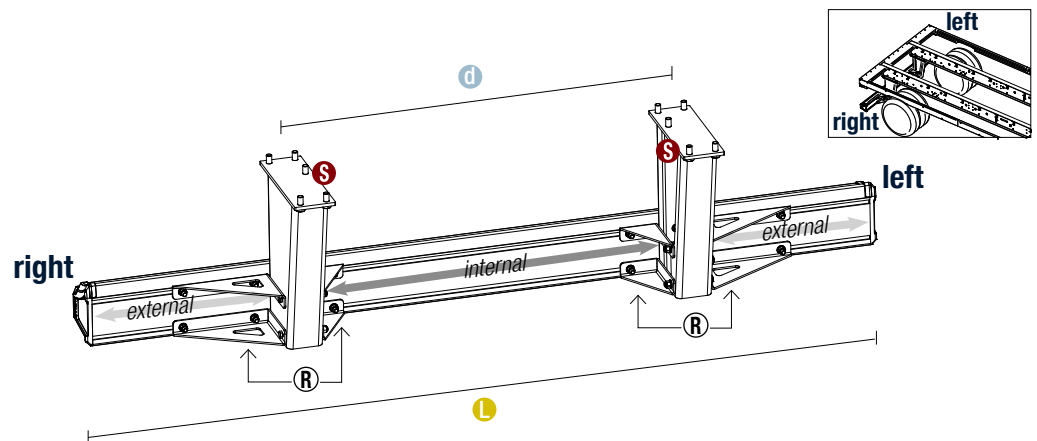

CONFIGURE SEENA 2.0

SEENA 2.0 rear underrun device is type approved according to the ECE R.58-03 regulation when installed using the supporting elements and brackets which are indicated in the Homologation document, available for download in the dedicated section of our website www.lagoaccessori.net

Precise combinations of mounts and brackets are required for compliance based on the variables in the vehicle. The following table can guide you in choosing the right elements for your vehicle.

By following these steps you will be led to a required configuration

- S** Choose **SUPPORT 2.0 bumper** type
- L** Choose **SEENA length**
- d** Choose **distance range between SUPPORTS**
- R**= Intersect **L** & **d** in the following table to find the suitable **REINFORCEMENT BRACKETS** and their positioning (internal and/or external)

S SUPPORT	L SEENA length	position	d distance between SUPPORTS		
			850-1199	1200-1350	1351-1450
